Panelvit® INOX

A2 AUSTENITIC STAINLESS STEEL

Screw for outdoor applications, in damp and marine environments or in the **presence of industrial and "aggressive" atmospheres.**

The Panelvit® inox screw is made of A2 austenitic stainless steel, to ensure an **effective protection against corrosion and rust.**

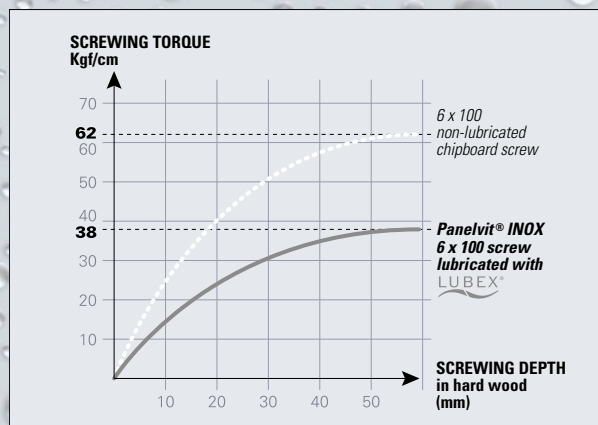

Though not heat treated, the Panelvit® stainless steel screw is driven **without a pilot hole** even in hard wood and allows rapid and secure tightening.

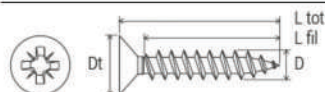

This is due to:

- a **hard/work-hardened material**, which prevents the screw from breaking and the hole from stripping;
- **The MUSTAD LUBEX® lubrication**, which reduces the tightening effort by up to 50% (see graph);
- the **deep, smoothing and sharp thread**;
- the **OGIVE-SHAPED TIP.**

The **passivation treatment** gives the screw a long-lasting, bright and shiny appearance.

Graph comparing the tightening torque of a Panelvit® screw lubricated with LUBEX® with an unlubricated screw.
